

leetcode

functional requirements:

user should be able to submit solution based on his preference.

user should be able to search for any problem based on his preference,

user should be able to participate in any coding contest based on his preference,

Non-functional requirements:

data-partitioning,

load balancing,

fault tolerance,

vertical scalability,

horizontal scalability,

low latency,

high throughput,

CAP theorem (we need to prioritise Strong consistency for rank predictions during contests
& for search scenario we can prioritise 99.99% uptime ie Availability>>Consistency)

Core Entities:

user ,

problem,

solution,

contest,

API :

POST:/submit/solution

{

userID,

filemetadata

}

GET:/search/{problemID}

HLD:
