

Rate limiter

Functional requirements:

user should be able to send all the incoming request within limit/threshold configured
all the requests beyond threshold should be discarded

Non-functional requirements:

Data-partitioning,

load balancing

fault tolerance,

vertical scalability,

horizontal scalability,

low latency,

high throughput,

CAP theorem (Here eventual consistency is fine, but here we need 99.99% uptime

i.e Availability>>Consistency)

Core Entities;

user,

requests,

response

API:

POST:/send/request

{

 userID,

 filemetadata

}

HLD:
