

Top-K Youtube Videos

Functional requirements:

user should be able to sort videos based on his preference,
top-K videos should get adjusted based on the user's activity

Non-functional requirements:

- Data-partitioning,
- load balancing,
- fault tolerance,
- vertical scalability,
- horizontal scalability,
- low latency,
- high throughput,
- CAP theorem (Here eventual consistency is fine , but here we need 99.99% uptime i.e Availability>>Consistency)

Core Entities:

user,
video,
history,

API:

GET:/top/{K}

HLD:
