

Leetcode

Functional requirements:

user should be able to solve & submit any problem based on his preference,
user should be able to search for any problem based on his preference,
user should be able to participate any coding contest based on his preference,

Non-functional requirements:

Data-partitioning,

load balancing,

fault tolerance,

vertical scalability,

horizontal scalability,

low latency ,

high throughput,

CAP theorem (We need to prioritise Strong consistency for rank predictions during contest i.e

Consistency>>Availability & for search scenario we need to prioritise 99.99% uptime

i.e Availability>>Consistency)

Core Entities:

user,

problem,

contest,

API :

POST:/solution/submit

{

 userID,

 filemetadata

}

GET:/search/{problemID}

HLD :
