DropBox :

Functional requirements:
user should be able to upload/download any file based on his preference,
user should be able to search for any file among the existing files based on his preference,

Non-functional requirements:
Data-partitioning,
load balancing,
fault tolerance,
vertical scalability,
horizontal scalability,
low latency,
high throughput,
CAP theorem (Here eventual consistency is fine , but here we need 99.99% uptime i.e Availability>>Consistency)

Core Entities:
user,
file,
history,

API :
POST:/upload
{
userID
{filemetadata}
}
