Ticket Master :

Functional requirements:
User should be able book an event ,
user should be able to search for some event based on his preference,
user should be able to make payment post booking

Non-functional requirements:
Data-partitioning,
load balancing,
fault tolerance,
vertical scalability,
horizontal scalability,
low latency,
high throughput,
CAP theorem (Here we need to prioritise Strong Consistency for booking scenario ,
in order to avoid double booking/double payment & for Search scenario we need to prioritise 99.99% uptime i.e Availability>>Consistency)

Core Entities:
user,
booking,
payment,

API :
POST:/booking/event
{
    userID,
    eventID,
    {booking Metadata}
}
GET:/search/{eventID}
