

Ticket Master

Functional requirements:

User should be able to book tickets,
user should be able to search for some events,
user should be able to make payments

Non-functional requirements:

Data-partitioning,
load balancing,
fault tolerance,
vertical scalability,
horizontal scalability,
low latency,
high throughput,
CAP theorem (Here we need to prioritise Strong Consistency for booking scenario, in order to avoid Double booking/Double payment , & for search scenario we need to prioritise 99.99% uptime Availability>>Consistency)

Core Entities :

user ,
book,
event,
payment

API:

POST:/booking/

```
{  
  userID,  
  bookingID,  
  bookingStatus  
}
```

GET:/search/eventID

HLD:
